Why Use Dry Powders?

For commercial chicken spice production, dry powders are preferred because they last longer, mix evenly, prevent spoilage and improve shelf life.

Do not use fresh crushed garlic, onion or chilli in dry spice blends because the moisture can cause mould, clumping and spoilage.

1. Making Garlic Powder

Peel garlic cloves, slice thinly, dry completely in the sun or a low-temperature oven until brittle, grind into powder and sieve.

2. Making Onion Powder

Slice onions thinly, dry thoroughly, grind into powder and sieve. Onion generally takes longer to dry than garlic.

3. Making Chilli Powder

Use dried chillies or dry fresh chillies completely before grinding. Sieve for a fine powder.

Safety Note

When grinding chilli, work in a ventilated area and avoid touching your eyes. A dust mask is recommended.

Low-Cost Zimbabwean Alternative

If garlic or onion powder is unavailable, temporarily increase stock powder and paprika while sourcing proper ingredients.

Suggested Sources in Zimbabwe

Mbare Musika, spice wholesalers, Indian shops, butcher suppliers, TM Pick n Pay and OK Zimbabwe.

Arachis Business Tip

Strong aroma, consistent quality and professional packaging are key to selling successful chicken spice products.
