Product: Lollipop Sweets

Batch Size: Approximately 1 kg finished sweets

Skill Level: Beginner to Intermediate

Main Process: Sugar boiling to hard-crack stage

1. Basic Lollipop Formula - 1 kg Batch

Ingredient	Quantity	Purpose
White sugar	700 g	Main sweet base
Liquid glucose / glucose syrup	250 g	Prevents crystallisation and gives smooth texture
Water	150 ml	Helps dissolve sugar before boiling
Citric acid	3-5 g	Balances sweetness and gives slight sour taste
Food flavour	3-5 ml	Gives taste: strawberry, orange, pineapple, etc.
Food colour	Small amount	Gives attractive colour
Lollipop sticks	As needed	For holding the sweets

This batch can make around 80-100 small lollipops, depending on mould size and how much syrup is poured into each mould.

2. Equipment Needed

- Stainless steel pot
- Stove or gas burner
- Sugar thermometer, if available
- Lollipop or silicone moulds
- Lollipop sticks
- Measuring scale
- Wooden spoon or heat-resistant spatula
- Clean tray
- Packaging plastics or wrappers

A sugar thermometer is strongly recommended because lollipops need the correct temperature to become hard and glassy.

3. Production Method

Step 1: Prepare the moulds

Clean and dry your moulds properly. Place the lollipop sticks into the moulds before cooking the syrup. The moulds must be dry because water can make the sweets sticky.

Step 2: Mix sugar, glucose and water

Add 700 g sugar, 250 g liquid glucose and 150 ml water into the pot. Stir gently before heating so that the sugar starts dissolving.

Step 3: Boil the mixture

Put the pot on medium heat. Stir only at the beginning. Once it starts boiling strongly, avoid too much stirring because it can cause crystallisation.

Step 4: Cook to hard-crack stage

Boil until the syrup reaches 145°C to 150°C. This is the hard-crack stage that makes lollipops hard and glassy.

Step 5: Add colour, flavour and citric acid

Remove the pot from heat. Wait for bubbling to reduce slightly, then add food colour, food flavour and citric acid. Mix quickly and gently.

Step 6: Pour into moulds

Pour the hot syrup carefully into prepared moulds. Work quickly because the syrup hardens as it cools.

Step 7: Cool and package

Allow the lollipops to cool completely for 20-30 minutes. Remove from moulds and wrap each lollipop immediately.

4. If You Do Not Have a Thermometer

Use the cold water test. Take a small drop of the boiling syrup and drop it into a cup of cold water.

- The syrup is ready when it becomes hard immediately.
- It should crack when bitten.
- It should not bend like soft toffee. If it is soft or chewy, continue boiling.

5. Optional Flavour Variations

Variation	Colour	Flavour	Citric Acid
Strawberry	Red	Strawberry	3-5 g
Orange	Orange	Orange	3-5 g
Pineapple	Yellow	Pineapple	3-5 g
Sour lollipop	Any colour	Any flavour	6-8 g

Do not add too much citric acid because it can make the sweets absorb moisture and become sticky.

6. Important Production Tips

- Use liquid glucose if possible. It helps stop sugar grains from forming.
- Do not over-stir after boiling starts.
- Do not add too much water. Too much water increases cooking time.
- Cook to the correct hard-crack stage. If undercooked, the lollipops will become sticky or chewy.

- Package immediately after cooling.
- Store away from moisture and direct sunlight.

7. Common Problems and Solutions

Problem	Possible Cause	Solution
Lollipops are sticky	Not cooked enough or exposed to moisture	Cook to 145-150°C and package quickly
Lollipops are grainy	Sugar crystallised	Use glucose and avoid over-stirring
Flavour is weak	Flavour added too early	Add flavour after removing from heat
Sweets are too dark	Heat too high or overcooked	Use medium heat and monitor carefully
Sweets remain soft	Did not reach hard-crack stage	Cook longer until syrup cracks in cold water

8. Estimated Selling Idea

- 5 small lollipops for \$0.50
- 10 small lollipops for \$1
- One large lollipop for \$0.25-\$0.50 depending on size and packaging

Good packaging can make the sweets look more professional and can increase customer confidence.

Safety and Hygiene Notes

- Hot sugar syrup can burn the skin badly. Wear closed shoes and avoid children near the production area.
- Use clean, dry equipment only.
- Use food-grade colours and flavours only.
- Label your product clearly when selling: flavour, production date and contact details.
